

HERMETIX^{7PLUS} SAFEGUARD CONQUERS SISYPHEAN TASKS.

The hospitality industries' monumental task is disinfecting infected rooms.

The following is a brief analysis of a Log-4 Kill, Log-5 Kill and Log-6 Kill product upon 100,000,000 contagious microbes: Log-4 Kill leaves 10,000 contagions, Log-5 Kill leaves 1,000 contagions and Log-6 Kill leaves 100 contagions. Now, what can these survivors do in just 8 hours? Under the right conditions and with a 30-minute microbe division, Log-4 Kill 10,000 could become 655,360,000 contagions, Log-5 Kill 1000 could become 65,536,000 contagions and Log-6 Kill 100 could become 6,553,600 contagions.

In contrast, **HERMETIX^{7PLUS} SAFEGUARD** may leave 10 but, when they or their offspring alight on the **HERMETIX^{7PLUS} SAFEGUARD** invisible residual shield, they perish. The **HERMETIX^{7PLUS} SAFEGUARD** shield remains until it is acted upon by marauding microbes, hands, fingers, soap and water or dust cloths, etc.
